

Introduction to SASS and Vue part 3

Lab part 1: Sass basics – not being marked.

Working on your G-Drive using VS code follow slides 8 - 18 of the Sass lecture to create and watch your first sass code.

You can look at the mixins and extends parts too once you are finished. The files are on Moodle

Lab part 2 or at home: Vue video lessons - Task 3 of Coursework – **being marked.**

Starting with the zip file “Lesson 8-start code for lab” on Moodle or building on your own previous lessons, begin the lesson 8 tutorial video “Computed Properties’ at:

<https://www.vuemastery.com/courses/intro-to-vue-3/intro-to-vue3>

In the labs **using headphones and in your own time** work through lessons 8-10.

Don't just rush through these, make sure you understand what is being said. There are no prizes for doing this quickly!

I will assume you have done all 3 lessons when we move on next week. Stay up to date.

If you want any feedback or help, ask me in the labs or you can Teams me or email me.

6 points in total available for this week.

All tasks finished and code working, comment your code as you go.

Annotated screenshots of the browser output for each task added to a logbook pdf

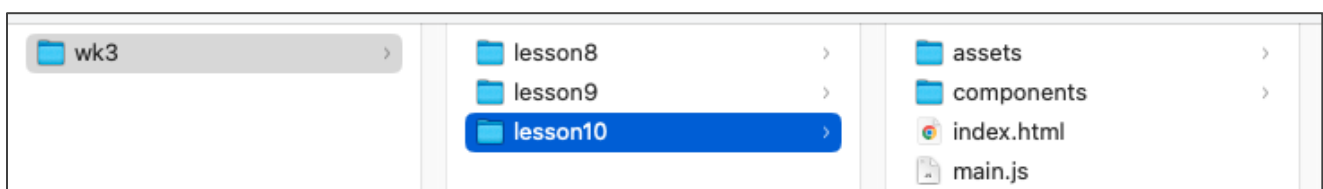

Use the annotations to **explain briefly** what is happening and what you have understood.

You need to add 1 screenshot, cropped and resized, for tasks 8, 9 and 10. So that's 3 screen shots in all plus some annotations.

Make sure there is something in the screenshots to identify you, your name or id,

When it finally comes to submission time you will have a folder called week 3 containing 3 folders lesson 8, 9 and 10 which will contain your code. This will form part of the final upload zip

I will go over this again don't worry, but something like this.

If you don't understand something, ask us.

To carry on learning Vue in your own time try lesson 11 or look at more courses at <https://www.vuemastery.com/courses>
